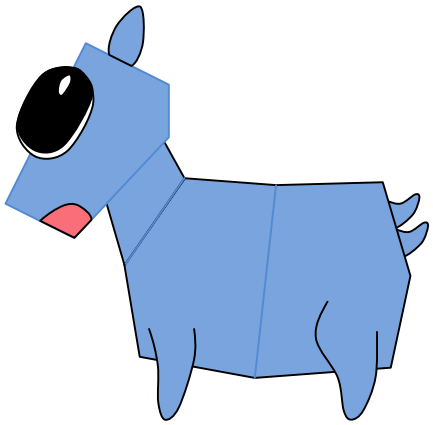
How to Assemble



Print Page 1 on **thick paper**, like 67 lb. or 110 lb. cardstock. It will last longer!

For the best folds, score each folding edge with a knife or round-ended scoring tool. Score solid gray lines on the front and score dashed gray lines from the back.

Head Assembly -

- Score all folding edges and cut out. No need to score the ears.
- When gluing together, paste tab 1 first, then glue the sides of the head onto the remaining tabs.

Body Assembly -

- Carefully score and cut out body. Remember to score the dashed lines on the back side of the paper (Make knife dents on the front and then use a ruler to connect the dents you've made with a score line.
- Glue tab 1 to the other side of the loop (at the neck).
- Cut out and score the body sides, each on the solid gray lines.
- Glue a body side to one tab from the body center piece. Make sure you glue it to the right flap! (lay it out and "dry-fit" it to make sure.)
- Put glue on the rest of the tabs and carefully attach them all. This is where "Tacky Glue" from the craft store will make you happy.

Ears and Feet –

- Cut out ears and feet and glue them to the white sides of the ears on the head piece and the white, inside faces of the feet. Make 'em blue!

Tails –

- Score the tail pieces down the middle.
- Cut out the two tail pieces, fold them, glue them in the white rectangles (don't glue the tabs together!)
- Glue tails to the body.

Finally – Glue the head to the body (via the neck, smarty pants). You are done!
